

## Datasheet Cepro grinding strips

Cepro Clear glass clear transparent strips are meant for application in workplaces where protection is required grinding sparks. When the mechanical load is heavy and regular, strips are recommended.

Cepro Clear strips have a thickness of 2, 3 or 4 mm and a width of 200, 300 or 400 mm. The strips can be cut and punched to any desired length. The strips are also available on full rolls (length 50 meter) or part rolls. In order to suspend the strips a plastic suspension clip is available which fits on a pipe max. Ø 35 mm.

Cepro Clear strips are self-extinguishing and therefore withstand grinding sparks. They are, however, not suitable as a welding blanket and do not withstand open fire and intense heat. Cepro Clear strips do not offer visual protection against dangerous rays which are emitted by welding.

On request we can also supply clear PVC sheet material in various widths and thicknesses.
